Summary

This is a proof of concept integration between a GitHub ([GitHub, 2008](#)) repo and figshare ([figshare, 2016](#)) in an effort to get a DOI for a GitHub repository. When a repository is tagged for release on GitHub, Fidgit ([Smith, 2013](#)) will import the release into figshare thus giving the code bundle a DOI. In a somewhat meta fashion, Fidgit is publishing itself to figshare with DOI '<https://doi.org/10.6084/m9.figshare.828487>' ([figshare Archive, n.d.](#)).

Statement of need

Something profound about how this is a very important area of research...
